

Understanding DL Architectures for Image Segmentation

Approach to solve Blood Cell Segmentation

Advanced
Deep Learning

Understanding DL Architectures for Image Segmentation

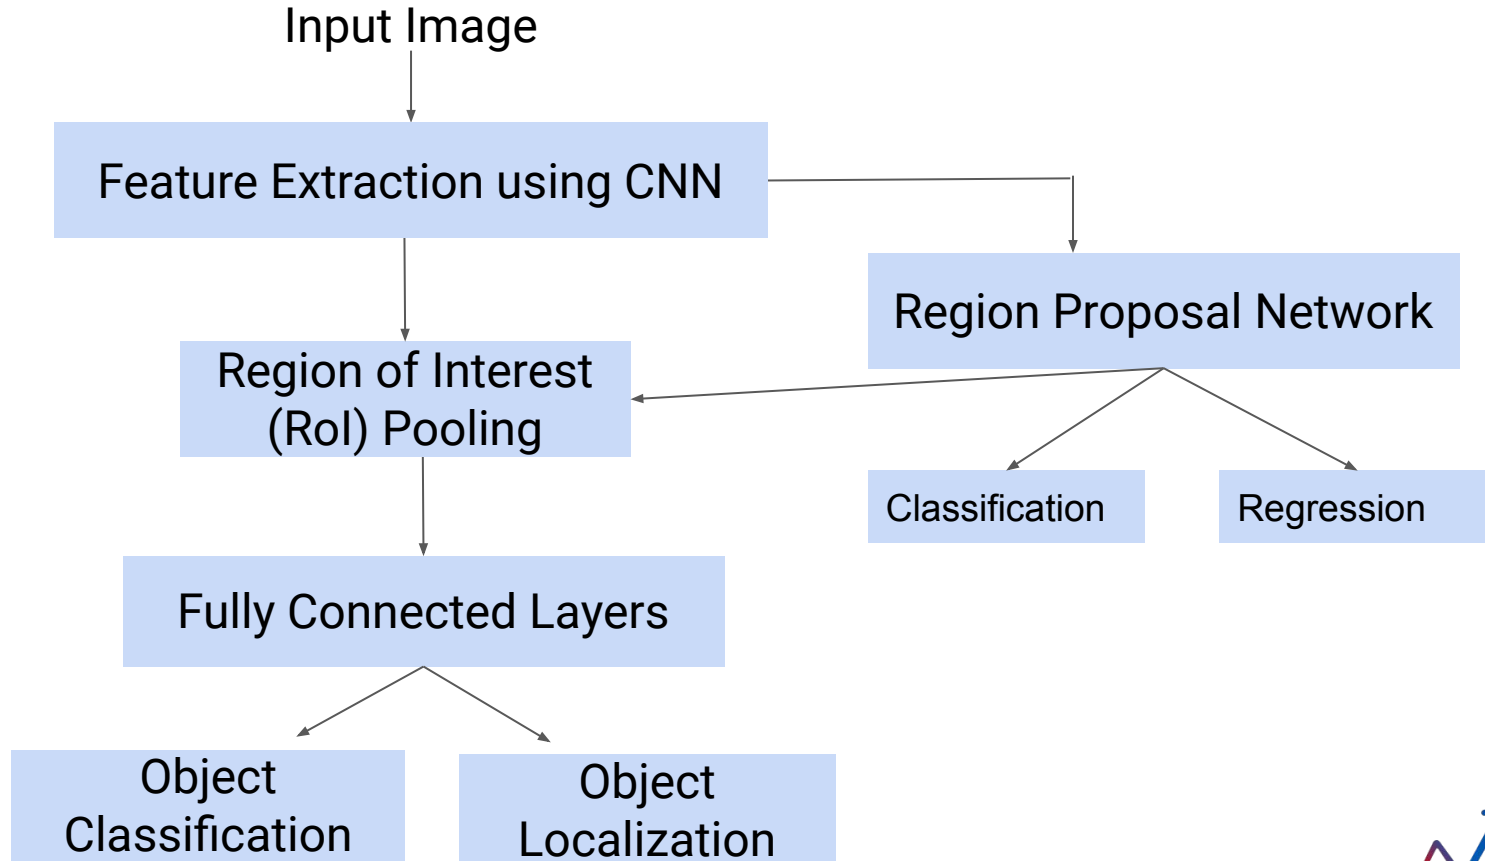

- UNet Family
- DeepLab Family
- R-CNN Family

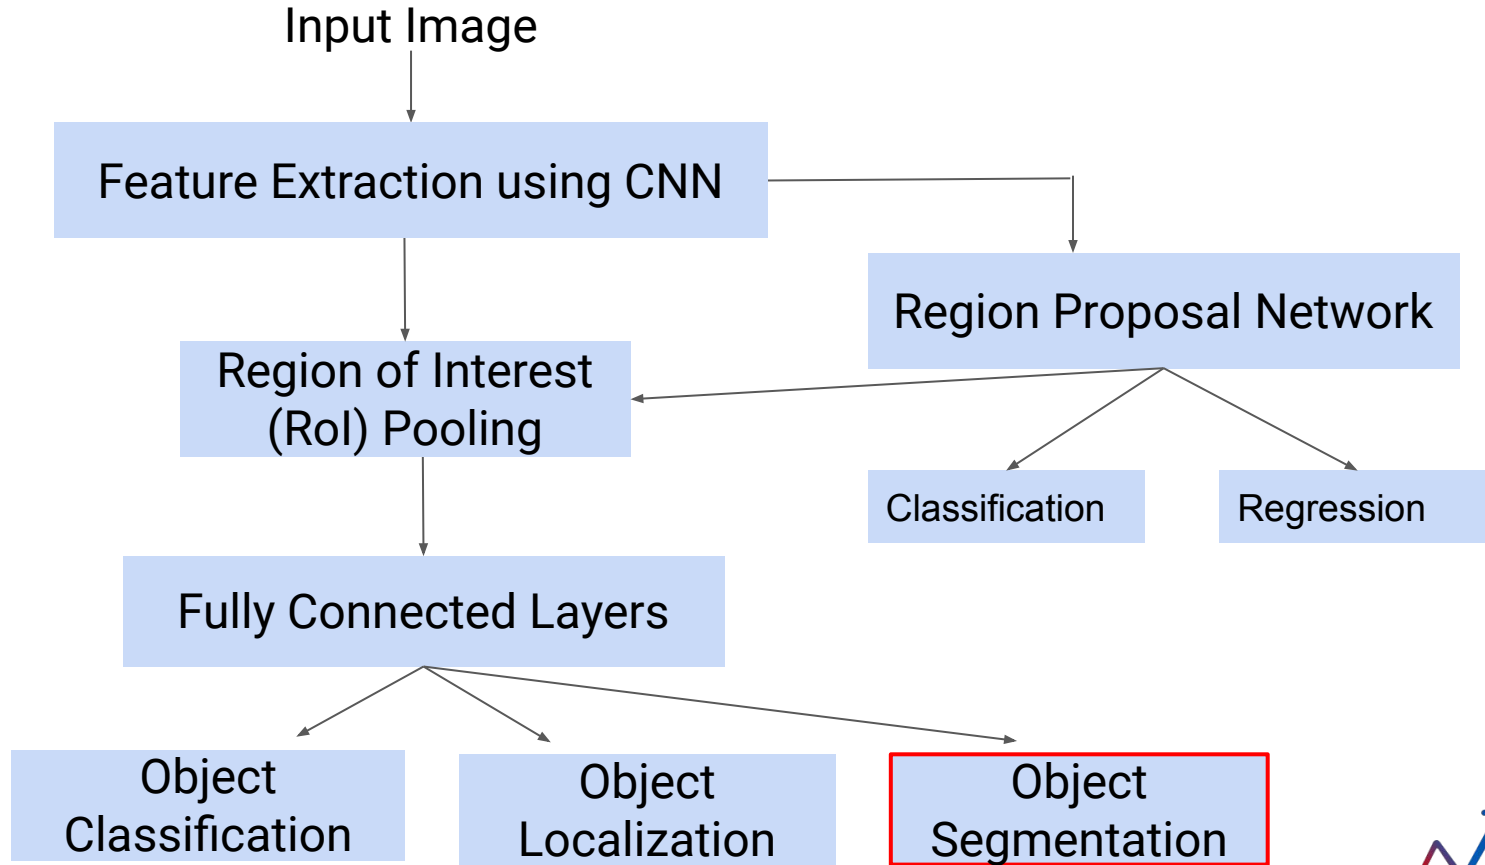

Key Contributions of R-CNN Family

- Builds upon Faster R-CNN architecture, but we apply Segmentation mask along with Classification and Box Regression

Recap: Faster R-CNN

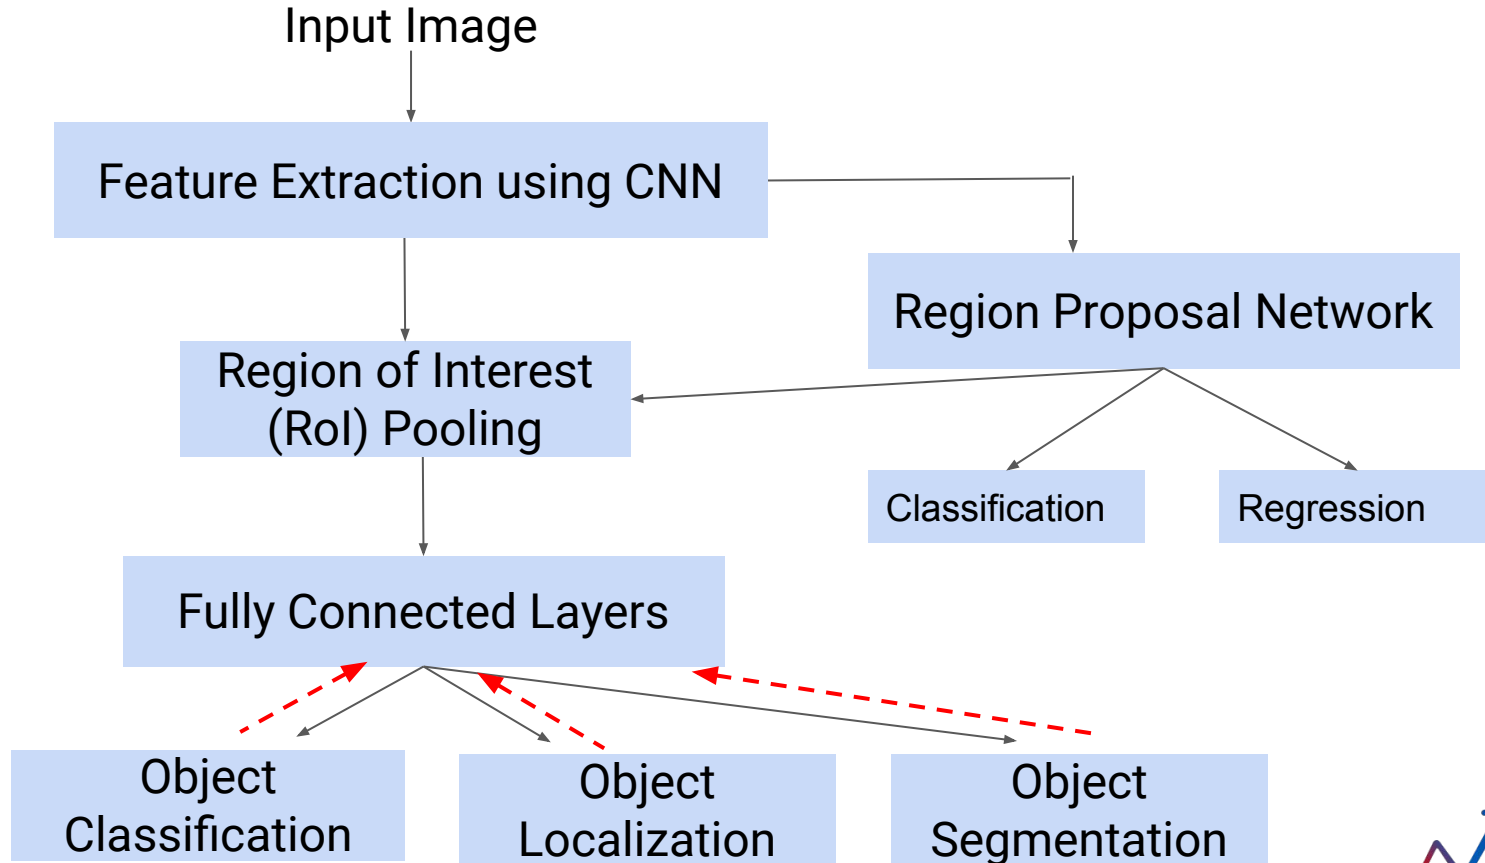

Mask R-CNN

Key Contributions of R-CNN Family

- Builds upon Faster R-CNN architecture, but we apply Segmentation mask along with Classification and Box Regression
- Multi-task training for Image Segmentation

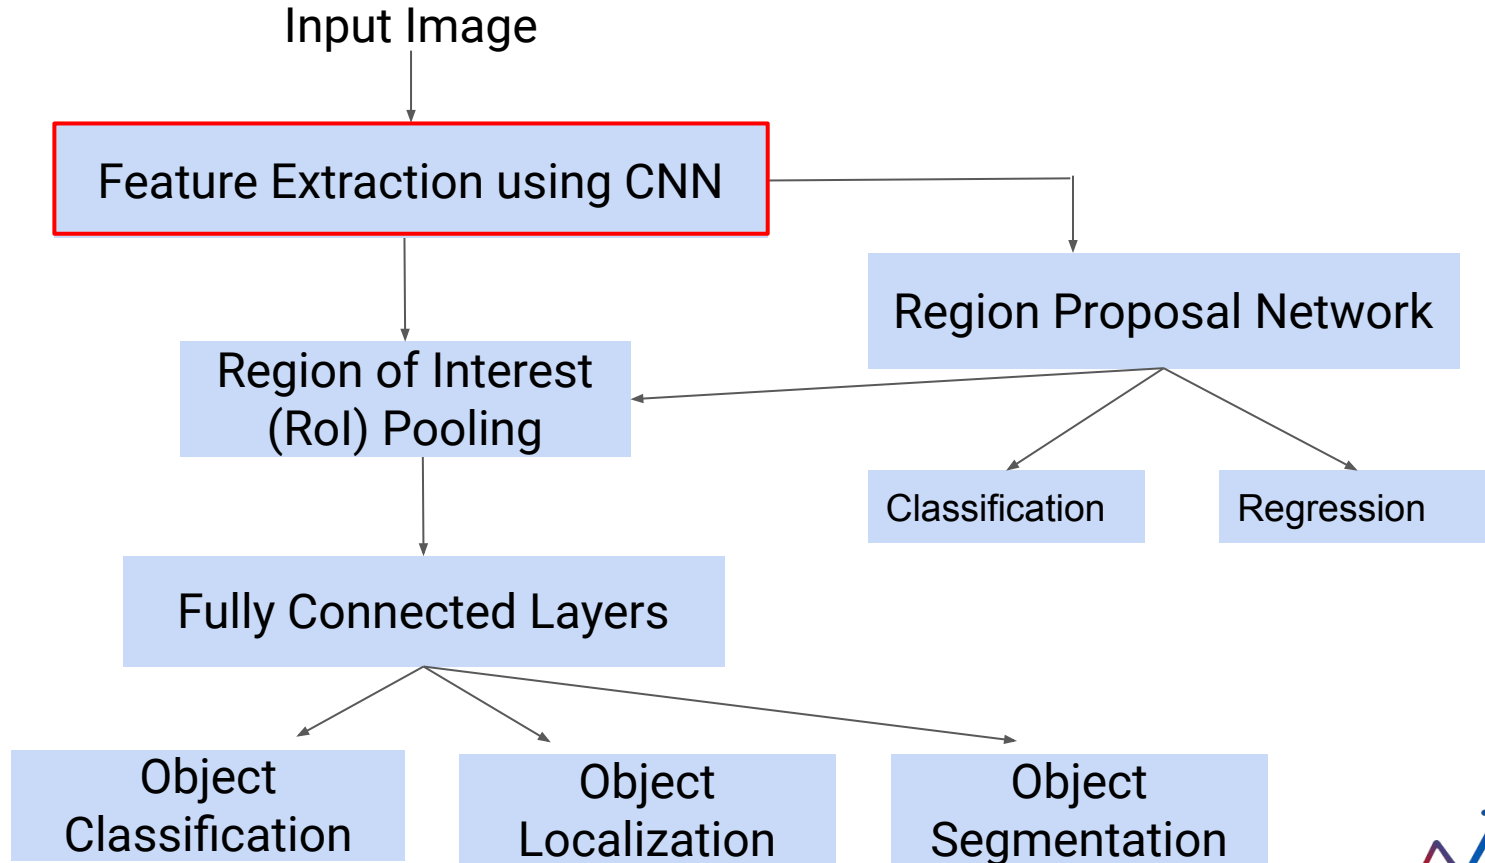

Mask R-CNN

Key Contributions of R-CNN Family

- Builds upon Faster R-CNN architecture, but we apply Segmentation mask along with Classification and Box Regression
- Multi-task training for Image Segmentation
- Feature extraction using either pretrained models like Resnet or Feature Pyramid Networks

Mask R-CNN

Key Contributions of R-CNN Family

Semantic Segmentation

Instance Segmentation

Steps for Image Segmentation using Mask R-CNN model

1. Data Loading and Preprocessing

1.1 Load the Data

1.2 Define custom dataset and dataloader

1.3 Data Exploration

2. Image Segmentation through Mask R-CNN model

2.1 Define model architecture

2.2 Train the model

2.3 Calculate IoU score

Code Walkthrough of Mask R-CNN
